FLOODPLAINS

13.03-1S20/03/2023
VC229**Floodplain management****Objective**

To assist the protection of:

- Life, property and community infrastructure from flood hazard, including coastal inundation, riverine and overland flows.
- The natural flood carrying capacity of rivers, streams and floodways.
- The flood storage function of floodplains and waterways.
- Floodplain areas of environmental significance or of importance to river, wetland or coastal health.

Strategies

Identify land affected by flooding, including land inundated by the 1 in 100 year flood event (1 per cent Annual Exceedance Probability) or as determined by the floodplain management authority in planning schemes.

Avoid intensifying the impact of flooding through inappropriately located use and development.

Plan for the cumulative impacts of use and development on flood behaviour.

Locate emergency and community facilities (including hospitals, ambulance stations, police stations, fire stations, residential aged care facilities, communication facilities, transport facilities, community shelters, child care centres and schools) outside the 1 in 100 year (1 per cent Annual Exceedance Probability) floodplain and, where possible, at levels above the height of the probable maximum flood.

Locate use and development that involve the storage or disposal of environmentally hazardous industrial and agricultural chemicals or wastes and other dangerous goods (including intensive animal industries and sewage treatment plants) outside floodplains unless site design and management is such that potential contact between such substances and floodwaters is prevented, without affecting the flood carrying and flood storage functions of the floodplain.

Ensure land use on floodplains minimises the risk of waterway contamination occurring during floods and floodplains are able to function as temporary storage to moderate peak flows and minimise downstream impacts.

Policy guidelines

Consider as relevant:

- Regional catchment strategies and special area plans approved by the Minister for Environment or Minister for Water.
- Any floodplain management manual or guideline of policy and practice, or catchment management, river health, wetland or floodplain management strategy adopted by the relevant responsible floodplain management authority.
- Any best practice environmental management guidelines for stormwater adopted by the Environment Protection Authority.

Policy documents

Consider as relevant:

- *Victorian Floodplain Management Strategy* (Department of Environment, Land, Water and Planning, 2016)

Proposed C125well

Policy Application

This policy applies to land within the Floodway Overlay or Land Subject to Inundation Overlay, which includes land inundated by a 1 in 100 year flood event (1 per cent Annual Exceedance Probability) as determined by the relevant floodplain management authority.

Strategies

- Discourage the import of fill to land.
- Discourage the construction of levees in areas regarded by the relevant floodplain management authority as important for flood storage and environmental values.
- Discourage earthworks that obstruct natural flow paths or drainage lines.
- Ensure buildings and works are appropriately designed and sited to avoid impacts on waterways, floodplains and wetlands.
